General Information

We hope AutoPlate will be your one stop destination for all of your custom license plate needs. The AutoPlate product line is available exclusively through advertising specialty distributors. AutoPlate's unique **HI-GLOSS** Poly (Polyethylene) is more durable and will not yellow from UV exposure like .015", .030", & .060" Polystyrene. Production time on the license plates is approximately 7 business days, F.O.B. St. Petersburg, FL.

.075" Premium Weight and .055" Standard Weight **HI-GLOSS** Polyethylene are for permanent use in states where a front license plate is not required.

.035" Medium Weight and .023" Light Weight **HI-GLOSS** Polyethylene are primarily for dealer lot use. .035" is heavy enough for use without a frame and reusable.

.024" White Aluminum is for permanent use when a metal plate is preferred and non-embossed for quick delivery.

.024" Poly Coated Card is primarily used as a temporary registration plate in states where mandated by law due to it's limited durability.

All plates are white and can be full bleed printed at no additional charge except Aluminum plate backgrounds must have an 1/8" white border and 1/16" around the slots. UV ink is Screen Printed in Spot Color or Digitally Printed in 4 Color Process and topped with our unique Screen Printed UV Clear Coat for Maximum Gloss and durability.

* Vector art is art created in a vector based program such as Adobe Illustrator® or Corel Draw® and is comprised of vector based shapes.

Vector files containing placed raster images (.jpg, .tif, .gif, .png, etc.) do not qualify as acceptable vector art and may incur an art charge.

Raster images are acceptable for Digital printing but must be sent full size preferably on our templates at 300dpi. Full info and templates are available at AutoPlate.net.
